

## **COM CWW Perpetual Schedule Calendar** created by Jim Melanson

This is a perpetual calendar with shift schedules, and OT/CB assignment order.

### **Installation**

You need Java 8 or higher (Minimum JRE 1.8.0\_43). If your Java version is older then you will be prompted to download and upgrade to the most recent JRE (always a good idea). If you are a Chrome user, you will need to use IE or Firefox as Chrome does not support Java.

#### Windows Users

Unzip the file com\_cww.zip. There is a setup file inside. Extract it to your computer, double click it, then follow the prompts.

#### Mac / Linux

Unzip the file com\_cww\_jar.zip. There is a single JAR file inside. Extract it to your computer and then launch it.

### **Uninstall**

#### Windows

Use Control Panel->Programs to uninstall the application.

#### Mac/Linux

Just delete the JAR file.

### **Using the Application**

Just change the date to see the schedule for a full five week period. You can print the schedule or export the schedule to CSV using the two buttons on the interface.

Click Show My Schedule and select your platoon to print out your own platoon's schedule.

If you click the column headers, it will resort. Just click the date column header to restore the view.
