HFN – Hands Free Notes

With Hands Free Notes create Notes and List easy and practical (To Do List)

Some features that are our differential:
1 - Voice commands
"You can create 'Lists' or 'Notes' with a voice command only
      * Include, change, delete, search
      * The commands can be configured in any language.
      * The commands must be identified by the voice recognition function of your cell phone
      * For the same command you can configure up to 4 words that will be accepted

2 - Mark function

      * For example in a supermarket list you have several items registered and you will not always buy all items.

      "With the 'Mark' function, you can quickly place the products you will buy on this next purchase at the top of the list.

3 - In 'Menu-Settings' you can:

      * Configure the font size in Notes

      * Select if the notes will be protected by password or by reading the fingerprint.

      * Enable / Disable Voice command

      * Others ...

4 - Help:

On all screens, if you make a Long Click (click and hold) on the buttons and figures a help text will appear.

      * In the configuration of the voice commands there is a picture of a 'microphone' that you click on, waiting for the flag to turn green and speak the word of a command that you want to use and check if the voice recognition recognizes easy.

      * If you want to use this word, just put it in the option you want (it will automatically be available in the clipboard).

Any comments (compliments, criticisms or suggestions) send an email to
suporte@hsptec.com.br

HFN – Hands Free Notes

Voice Commands Configuration

Hands Free Notes ('HFN') can be controlled via voice command, such as:

* Create a new 'Text or a new' List '.

* Open an existing 'Text or' List '.

* Skip the Line.

* Cancel last spoken text.

On each page of the application there is a 'Help' function to be able to check which commands are available on the screen.

Always before speaking a command, a key word is spoken indicating to the application that a command to be interpreted follows.

To be a command, it must be said at the beginning of recognition (after the application has interpreted the last word or phrase).

Initially we set the word 'OK' which is short and easy to pronounce but in the settings of the voice commands ('Menu-Config. Voice') it is possible to change and put any other that you consider more practical.

For example to start a new list the command is "OK List"

The HFN has the interface, today, in English and Portuguese but the commands can be configured in any language such as Spanish, French, German, any that the voice recognition of your cell phone understands.

In 'Menu - Voice Config' you have a list of all existing commands and their functions and the words chosen to execute.

HFN – Hands Free Notes

Available Commands

The commands are already configured with the words to be used to execute it

These words can be changed or added to perform the same commands.

For example, the command "Open" that opens an existing Note or List can be configured with the word 'open' and the word 'open' or even 'open' (you can configure up to 4). So any of them the HFN will understand that is to open a Note or Text.

Command List

"Command" This is the Key word that will indicate to the 'HFN' that a command to be interpreted will be spoken next.

Initially, the words "OK" or the symbol "*" are configured.

Then to start a command, say "OK" + command.

If "OK" is in the middle of the text it will not be interpreted as a command.

So if you are saying a phrase like "Tomorrow continue project OK"

Commands

Note:

1 - In "Words" the commands are already configured with 1 or 2 words that can be modified and registered up to 4 variations

2 - The commands in the background   premium version not yet available

3 - "Voice Feedback": is spoken with configured to return commands accepted by voice

4- Commands in background still not availiable

- • "**Note**"
